SQL Window Functions – Practice Questions

Topics: ROW_NUMBER(), RANK(), DENSE_RANK(), and PARTITION BY

Sample Table: Employee

EmpID	EmpName	DeptID	Salary
1	Arun	10	50000
2	Priya	10	60000
3	Kumar	10	60000
4	Divya	10	45000
5	Rahul	20	70000
6	Sneha	20	80000
7	Vijay	20	70000
8	Meena	20	55000
9	Karthik	30	60000
10	Anu	30	75000
11	Ravi	30	60000
12	Nisha	30	50000

Practice Questions

1. Display all employee details and assign a unique row number based on salary in descending order.

2. Display employee names, salaries, and their salary ranks from highest to lowest. Employees with the same salary should receive the same rank.

3. Rank all employees based on salary in descending order. Employees with the same salary should receive the same rank, without gaps in the ranking.

4. Assign row numbers to employees separately within each department, ordering employees by salary from highest to lowest.

5. Rank employees by salary within each department. Employees earning the same salary in the same department should receive the same rank.

6. Use a CTE to find employees whose salary dense rank is 2 or less within their department. Include ties.
